Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the

application:

Listing of Claims:

(original) A gear mechanism comprising a means to protect against 1.

wrapping that is disposed radially outwardly of a portion of a shaft that is driven by

said gear mechanism, wherein said means to protect against wrapping extends

between two side components that are disposed on said shaft portion and wherein

said means to protect against wrapping is rotatable about such shaft portion.

(original) A gear mechanism according to claim 1, wherein said means 2.

to protect against wrapping is disposed between said two side components with axial

play.

(original) A gear mechanism according to claim 1, wherein said two 3.

side components are fixedly disposed on said shaft portion.

(original) A gear mechanism according to claim 3, wherein said means 4.

to protect against wrapping is held in a frictional manner between said two side

components.

(original) A gear mechanism according to claim 1, wherein said means 5.

to protect against wrapping is disposed in a centered manner relative to said shaft

portion.

(original) A gear mechanism according to claim 5, wherein centering is 6.

effected by an abutment that is fixedly connected with said shaft portion.

Appl. No. 10/625,372

Amdt. Dated: 14 March 2005 (Monday)

Reply to Office Action of: December 14, 2004

7. (original) A gear mechanism according to claim 5, wherein the

centering is effected by at least one collar that is fixedly connected with said means

to protect against wrapping.

8. (original) A gear mechanism according to claim 1, wherein at least one

of said side components is a tiller star.

9. (original) A gear mechanism according to claim 8, wherein both of said

side components are two adjacent tiller stars that are disposed on one side of a

housing of said gear mechanism.

10. (original) A gear mechanism according to claim 1, wherein one of said

side components is connected with a housing of said gear mechanism, and wherein

said housing is not moved.

11. (original) A gear mechanism according to claim 1, wherein said means

to protect against wrapping is a cylindrical sleeve.

12. (new) A gear mechanism comprising a means to protect against

wrapping that is disposed radially outwardly of a portion of a shaft that is driven by

said gear mechanism, wherein said means to protect against wrapping extends

between two side components that are disposed on said shaft portion,

wherein said means to protect against wrapping is rotatable about such shaft

portion, wherein said means to protect against wrapping is disposed in a centered

manner relative to said shaft portion, and

wherein centering is effected by an abutment that is fixedly connected with

said shaft portion.
